

Smart Refrigerators Monitoring, Data Logging & Alarming

Regulatory Compliance

With our redundant, gap-free, secure and protected data records that comply to EN12830:2018.

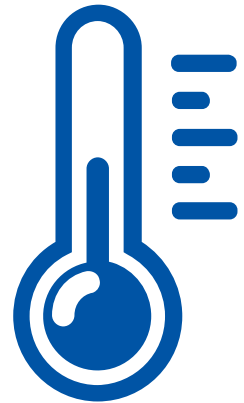

Avoid Downtime

Get real time alerts for equipment and power failures and save your stored goods.

Monitor Impact

Assess whether your energy reduction and optimization measures generate profit.

FrigoBoss Refrigerators Monitoring, Data Recording and Alarming platform provides a powerful analytical tool for commercial refrigerator and cooling/heating systems owners, that enables them to meet regulatory compliance requirements, as well as to fully optimize the performance and energy efficiency of their infrastructure based on the intuitive data analytics, leading to significant cost savings.

Alarming

- Get real-time critical system alarms and prevent downtime
- Alarms via SMS, email or voice calls to selected staff and tech support.

Fast set-up

- Minimum installation time is required on-site for full deployment.
- Hot-swap, maintenance free system functionality and full scalability.

Capacity

- The system can be tailored and built exactly to your requirements.
- Supports practically unlimited sensors and smart devices.

Our Service:

Our service is not limited only to data recording for regulatory compliance requirements. It is an advanced, total monitoring, predictive maintenance and performance optimization service that offers great value to our customers. It is based on the thorough scientific analysis of the data recorded by the system, utilizing artificial intelligence (AI) techniques. This analysis enables us to point out each system's operational inefficiencies and problems and to effectively address them, providing a high performance, data-driven maintenance plan, which in turn generates great cost savings for our customers in terms of energy usage, predictive maintenance and prevention of unnecessary downtimes.
